ABOUT ME

As a self-taught programmer, I began my journey with C# and progressed to .NET and ASP.NET MVC. During my learning process, I developed two major projects with services and SQL connections. These dynamic websites, both restaurant sites with registration and roles, were fully responsive. The second project was more e-commerce oriented, featuring a shopping cart. In addition to web development, I have also created .NET applications such as a calculator app that utilizes an API. I continue to practice and improve my skills in algorithms through platforms like LeetCode.

UNIVERSITY

Tbilisi
2026

Bachelor of Science in Computer Science

I studied algorithms at Georgian Technical University, gaining a comprehensive understanding of sorting, searching, graph algorithms, and dynamic programming. My computer science education also included programming in languages such as C++, C#, Java, and Python, as well as the study of data structures like arrays, linked lists, stacks, queues, trees, and graphs.
